

Module 8 Reflection

Madeline Judge

WRA 210

When reorganizing the files in my Github folder, I was debating whether I should sort items by file type, topic, or module number. I considered grouping all of my wireframes in one folder, for example, but ultimately decided that keeping things grouped by module was going to be the easiest to find. When I'm organizing other websites, I will take the file type into higher account. For the purposes of my class website, it made sense to me to keep module materials together so that I can easily find them when needed. To do this, I created parent folders within my Github folder and labeled them by module. I then dragged and dropped appropriate items into the corresponding folder. If I have more materials to wade through, I would have considered creating child folders within each module folder, but I decided that there were not enough individual items to bother doing that at this point. I then updated my links to reflect my changes. I chose not to change the layout of my website because I like having each module visually laid out and avoiding downloading a zip file for every project. As I add more files to my website, I might reconsider this decision.
